

Decomposing user stories into tasks

This report contains the user stories for a system to connect people looking for a new job with employers having job offers

Instructions: For each user story, decompose the user story into tasks. then, for each task, estimate the story points of each task and identify the dependencies.

U1: *As Alice, an employer, I would like to post a job offer that contains a title, a description and a list of keywords associated with it.*

U2: *As Bob, an job seeker, I would like to search for job offers based on keywords and get the list of the top 10 results.*

U3: *As Bob, a job seeker, I would like to a apply to a job offer by submitting my resume and cover letter directly through the application.*

U4: *As Alice, an employer, I would like to collect all applications by downloading one zip file containing them all .*
